

About PhRMA

Who We Are

The Pharmaceutical Research and Manufacturers of America (PhRMA) represents the country's leading innovative biopharmaceutical research companies, which are laser focused on developing innovative medicines that transform lives and create a healthier world. Together, we are fighting for solutions to ensure patients can access and afford medicines that prevent, treat and cure disease.

Membership Criteria

The lifeblood of health care is research and discovery. Among eligibility criteria to be a member in PhRMA, companies must:

- Have a three-year average global R&D to global sales ratio of 10% or greater, and
- Have a three-year average global R&D spending of at least \$200 million per year

Most PhRMA member companies far exceed this threshold. Over the last decade, PhRMA member companies have invested more than \$900 billion in the search for new treatments and cures, and they support nearly five million jobs in the United States. This is one of the highest levels of investment intensity among all industries in America.

The number of biopharmaceutical manufacturing plants has grown in recent years, now numbering over 1,500 facilities across 48 states and Puerto Rico.

Member Companies

PhRMA's member companies are committed to the search for new treatments and cures, leading the charge to beat devastating diseases. They are pioneers in innovation, ushering in a new era of treatments for patients. A list of our member companies is below.
